

# Option Process Update

# Current position

You have now had access to your options booklet and have watched the video presentations for all of the 15 subjects available.

You can watch these presentations again from the Academy Website (copies of the option booklet and form are also available on the website).

You now need to complete the option form which you should have received with this presentation.

# Option selection process

You have 15 subjects that you can choose from.

There are no combinations of subjects that are not allowed.

From the 15 subjects available, you **MUST** identify 6 subjects that you would like to study from the start of Year 10.

Your option form needs to be handed in by March 24<sup>th</sup> 2022.

# Option allocation process

Every students' option choices are input into the options computer program and using this software I will look at all the various permutations and combinations of subjects in order to maximise the number of students that get their first four choice subjects.

Using this information, the computer software will then allocate students to subjects in each of the four option blocks created using the preference order to allocate subjects.

Where possible the first four subjects will be allocated to you as your subject choices.

Where the first four subject choices cannot be allocated due to subject clashes (i.e. two subjects in same option block) then your 5<sup>th</sup> and 6<sup>th</sup> choice subject will be used to complete the allocation.

# Option allocation process

- Once every student has been allocated to a subject in each of the option blocks then their subject allocations will be confirmed by letter (10<sup>th</sup> June 2022).
